

## Finally, an easy software lifecycle management tool optimized to work with Microsoft® Office tools

HandySoft, IDRT and other leading firms choose RTIME™, easy, affordable lifecycle management software from QAVantage to deliver better software faster.

Red Bank, NJ - March 7th, 2008, QAVantage, the only provider of a single Requirements Management and Delivery Assurance (RMDA) toolset that joins strategic software planning, prioritization and analysis with complete downstream requirements management and traceability today announced the release of RTIME™ version 4.5. RTIME™ delivers the collaboration, visibility and traceability teams need to minimize defects, reduce cycle times, lower costs and ensure technology project success. “Now for the first time, companies can keep using the Microsoft office tools they are familiar with while benefiting from the database driven structure, centralization and collaboration of a sophisticated lifecycle management tool without all the complexity and expense” said Daniele Chenal COO of QAVantage.

Since 2002, RTIME™ has been helping customers address the common challenges of reducing cycle times, lowering costs and improving software quality. Selected by HandySoft, IDRT and other leading firms over more complex and costly solutions, RTIME’s™ superior usability and affordability ensures adoption by all Business and Technical stakeholders. “Many development organizations are benefiting from new methodologies like Agile. Now they have a management tool that offers process control that is better matched to today’s faster paced software lifecycle”, Chenal added.

New features in RTIME™ 4.5 include:

- Enhanced integration to Microsoft® Excel, simplifying prioritization, trade-off analysis, release and iteration planning using the familiar capabilities of Excel with off-line support and synchronization back to the database
- Enhancements to the RTIME™ Microsoft® Project Gateway with advanced views and tools for “power Microsoft® Project users”
- Import and Export to and from Excel
- Enhanced task to requirement mapping and impact reporting delivering unmatched traceability
- Enhanced dashboard reporting at the project and portfolio level and more...

Developed and enhanced through nearly a decade of real-world project endeavors, RTIME’s™ feature-rich solution is available at a price point that any size organization can afford. Software vendors and commercial organizations alike will benefit from this database driven tool that has been integrated with standard Microsoft® Office applications to deliver a single, simple toolset teams can use to deliver better software faster.

### About QAVantage

QAVantage, based in Red Bank, NJ with over 75 global customers, is a software and consulting services company that specializes in software lifecycle management. RTIME™, initially developed and used as a servicing tool in 1997 has been in production and commercially available from QAVantage since 2002. RTIME™ is a software solution used to plan, track and manage software projects including commercial software, off-the-shelf software roll-out projects and software application development and customization projects.
